

RISK PROFILE: DEFENSIVE (LOW RISK)

DATE: 30 SEPTEMBER 2025

PORTFOLIO OBJECTIVE

This model comprises solely passive investment vehicles (such as unit trusts and exchange traded funds) that simply track a market and aim to deliver returns reflective of how that market is performing. Asset classes you could find in this portfolio are equities, government bonds, corporate bonds, alternatives, exchange traded commodities and cash. Property may feature within the alternatives classification.

The portfolio seeks to generate modest returns higher than cash in the bank over the short to medium term (3 - 5 years or more) with potential for consistent though constrained capital growth. Portfolios will typically comprise 10% equity and 90% non-equity, though weightings may deviate within set parameters, allowing managers to react to market conditions.

STRATEGIC V CURRENT ASSET ALLOCATION

TOP 10 ASSET ALLOCATION

PORTFOLIO ACTIVITY

Over the quarter TAM's Active portfolios have been well positioned to capture the positivity in the stock market via allocations to the US equity market but also a strong cohort of global investments capitalising on rallies in Europe, UK and Emerging markets which have all been positive contributors in Q3. Bond positioning has remained largely invested in high quality corporate bonds and emerging markets bonds which we believe still offer attractive risk reward symmetry in a bond market which remains overly challenged. TAM's investments into alternative asset classes such as gold has also helped to deliver value over the quarter.

As we move into the final quarter movements expected within the portfolios will see the inclusion of a TAM run multi asset fund into the models to assist in broadening our diversification for risk purposes without altering cost. Likewise portfolios will see a greater emphasis on enhanced investments as well as increases in alternative investments.

QUARTERLY REVIEW

The third quarter of 2025 delivered another strong period for investors and marked a meaningful turning point for global markets. After months of stubborn inflation, higher interest rates and uneven growth, the economic backdrop is beginning to stabilise and moderate. Inflation has levelled off, growth remains positive, and central banks are cautiously shifting towards a loosening of financial conditions which should help to foster a healthier investment environment as we head into year-end.

QUARTERLY OUTLOOK

Looking into the year end, markets remain resilient, supported by growth, healthy consumer savings, spending and growing earnings, especially in the indomitable US tech sector despite its somewhat expensive status as we stand today. History shows that rallies built on strong sentiment can last, but they require careful navigation and do usually have an end point to which TAM needs to be aware of, and spend time planning for how to properly protect clients if that eventually should occur. One key strategy we have always used to achieve this is deep levels of diversification and active management to keep that essential to balance between opportunity and risk as we move into the final quarter of the year which we anticipate being a positive one for us and for the portfolios we manage on your behalf.

RISK RATINGS

This model is rated 3 out of 8 on the TAM Risk Scale.
