

RISK PROFILE: DEFENSIVE (LOW RISK)

DATE: 30 SEPTEMBER 2025

PORTFOLIO OBJECTIVE

This model comprises sustainable investment vehicles including unit trusts, mutual funds and exchange traded funds (ETFs), whose managers aim to outperform their respective markets. Asset classes you could find in this portfolio are equities, government bonds, corporate bonds, alternatives, commodities and cash. Absolute return, multi-asset and property may all feature within the alternatives classification.

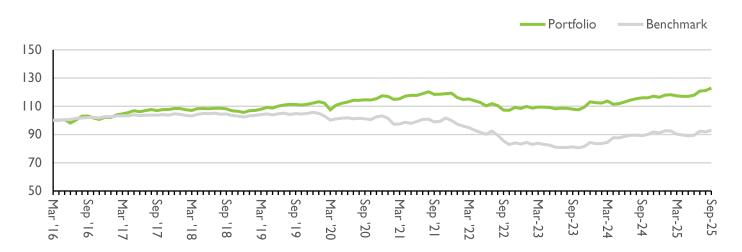

The portfolio seeks to generate modest returns higher than cash in the bank over the short to medium term (3 - 5 years or more) with potential for consistent though constrained capital growth. Portfolios will typically comprise 10% equity and 90% nonequity, though weightings may deviate within set parameters, allowing managers to react to market conditions.

PORTFOLIO ACTIVITY

Since the addition of two high quality equity funds at the start of the quarter, our portfolios have remained confidently positioned, capturing the broad market positivity through allocations to U.S. equities alongside a strong cohort of global sustainability-aware managers capitalising on rallies across Europe, the U.K., and emerging markets. These exposures, which include companies enabling climate transition and resource efficiency, were all positive contributors in Q3. Within fixed income, we have a cohort of stellar sustainability focused asset managers, with the ability to invest across both sustainability labelled and non-labelled bonds from sustainable issuers. We remain overweight short-dated bonds and have an overweight to quality corporates. Our positions in precious metals, including gold and silver, together with transitionenhanced commodities, have added meaningful value and continue to serve as both diversifiers and beneficiaries of geopolitical trends as well as clean-technology demand. Overall, the portfolios remain resilient, balanced, and aligned with our objective of delivering sustainable long-term returns while supporting the transition to a more resource-efficient global economy.

QUARTERLY REVIEW

The third quarter marked a turning point for global markets and sustainability-focused investors. Inflation pressures eased, central banks adopted a more supportive stance, and equities advanced steadily after April's turbulence. Global equities were broadly positive, led by the US where the S&P 500 rose 9.7% to new highs, while UK and European markets gained 5.7% and 4.7%. Emerging markets were standout performers, climbing 12.6% on a weaker dollar and stronger growth, particularly across Asia where green infrastructure and digital inclusion remain key opportunities. The rally has also broadened beyond big tech, with value, small-caps, and companies enabling the lowcarbon transition taking the lead, creating a healthier, more balanced environment. Our blend of thematic, improver, and impact strategies balanced growth with resilience. Fixed income stabilised, with bond portfolios up 2.4% as investors favoured high-quality corporate and sustainability-linked debt over government bonds. Precious metals outperformed drastically again, with gold up 18% and silver up 33%, reflecting both diversification benefits and rising demand from clean-tech industries.

RISK RATINGS

QUARTERLY OUTLOOK

As we enter the final stretch of 2025, global markets remain in strong momentum. Economic conditions are broadly supportive: growth is steady, corporate earnings are rising, and consumer demand remains firm. Investor enthusiasm around artificial intelligence, clean innovation, and infrastructure investment continues to fuel sentiment. While U.S. equity valuations look stretched, especially in technology, momentum remains powerful and could extend into 2026. The upcoming earnings season will be key. TAM expects the rally to broaden beyond U.S. tech, with opportunities in smaller global companies, select U.K. stocks, and emerging markets. Portfolios are positioned through high-quality global and U.S. ex-tech strategies managed by skilled stock pickers. We remain mindful that markets are climbing even as growth slows and gold prices strengthen. Inflation and employment data will guide central banks, with any inflation surprise likely to spark volatility. We stay fully invested while maintaining protection through diversification. In fixed income, we favour short-dated corporate and sustainabilitylinked bonds, complemented by allocations to gold, silver, transition-related commodities, and government bonds.
